

LOUVERS

Available in a variety of shapes and sizes, Melton Classics offers just the right Architectural Urethane[™] louver to enhance any architectural style. Louvers are offered in ventilating and non-ventilating designs. Functional venting louvers have openings between the slats and are covered on the rear with non-corrosive screening to allow unobstructed air flow and keep insects out. Decorative non-ventilating louvers are provided in one solid piece and do not allow air to flow through them. Decorative casings and keystones are available to enhance the appearance of Architectural Urethane[™] louvers. Louvers are also available routed to accept siding upon request.

NOTE: It is important to know that all open urethane louvers may allow water seepage during severe weather conditions. We recommend a flash pan be installed behind the louver to catch any water seepage.

See Installation Instructions for Complete details.

Melton Classics will offer to "route" louvers for siding applications. Please specify the dimensions required for your application. See additional cost for routing.

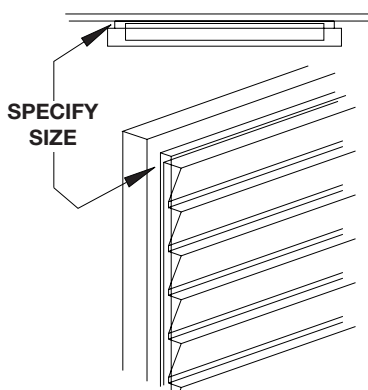

Numbering System:

Louver - Style - Width - Height

450 - 120 - 12 - 24

Louvers can be routed so that siding fits behind for a professional application.

EXAMPLE OF ROUTING EDGE.
